100'0" of 7/8 x 1 3/8" wood strip weigh approximately 20#

PRESENTING OUR ENTIRE LINE OF METAL CEILING AND SIDEWALL DESIGNS, INCLUDING OUR NEW DESIGNS IN STUCCO EFFECT AND COLONIAL ART

WESTERN CEILING AND STAMPING CO.
DUBUQUE, IOWA, U. S. A.

IN the better class of buildings being erected today, the demand is for material that is permanent, sanitary, fireproof and decorative; steel ceilings meet all these requirements, and are adapted for use in any style building. From an artistic standpoint Perfection Metal Ceilings answer every requirement. Our line includes several distinct classes of designing, the designs are such as to permit of variation and interchange to meet the various requirements in interior work. We have designs particularly adapted for use in churches, schools, theatres, lodge rooms, public buildings, stores and residences.

The mechanical perfection of our metal ceilings saves at least 25% on erection. The half oval bead gives the plate strength and rigidity while the stamped-in nailing button with countersunk head forms a self centering and absolutely accurate nailing point. It prevents the material from slipping, and enables the erector to place the nail in the correct position, thereby insuring speed, accuracy and permanence.

We maintain a department for the handling of inquiries on metal ceilings, and are in position to give prompt advice in regard to designs, prices, etc., for your particular requirements. With our large stock and manufacturing facilities we can make prompt shipment at all times.

GENERAL INFORMATION

With each ceiling we furnish a blue print showing exact arrangement of material shipped. Our plans are made in strict accordance with information furnished us, and we will not be responsible for errors due to changes or mistakes in information sent us. Additional material will be charged for extra.

Ceilings cannot always be arranged to accommodate lighting fixtures. All fixtures or drops should be placed so as to conform with the arrangement of the ceiling.

Our prices include wood brackets for cornices and moulds requiring them.

Furring strips are never shipped unless ordered, and are charged for extra. When strips are ordered, we ship them of standard size 7/8 in. x 1¼ in. Furring over plaster 7/8 in. x 7/8 in. may be used.

Our ceilings require no furring strips on wood sheathed surfaces.

Steel Ceilings weigh approximately 70 pounds per square and are shipped under fourth class freight rate.

TERMS

Regular: 60 days net or 2% for cash in 10 days.

Where we have no previous acquaintance purchaser will avoid delay by furnishing bank guarantee or other reliable references. If cash accompanies order, 2% discount is allowed.

The purchaser of limited responsibility when sending in order must include remittance for 25% of the price of the material ordered, the balance to be subject to Sight Draft with Bill of Lading attached.

Whenever we are instructed to ship Sight Draft with Bill of Lading attached, purchaser should indicate the bank through which he wishes collection made.

TO ESTIMATE QUANTITY

To arrive at the number of squares of material required for a ceiling, first, select the depth of cornice desired: to the width and the length of the room add the depth of the cornice dropping on each wall; multiply the totals together and the result will be the number of square feet required. For example: a room 20 feet x 60 feet using a cornice 12 inches deep,

Width	20 ft.	Length	60 ft.
Plus 12 in. drop		Plus 12 in. drop	
Cornice on both sides (2 x 12 in. = 24 in.)	2 ft.	Cornice on both ends (2 x 12 in.)	2 ft.
	22 ft.	x	62 ft.

22 ft. x 62 ft. = 13.64 square feet.

A square of ceiling means 100 square feet.

The above is for a room 20 ft. x 60 ft. with no openings, offsets, or beams: In case the room has exposed beams, each space or panel should be figured as a separate room and in figuring the price would take the list price for a room of size corresponding with that of each space or panel. Sufficient material to cover exposed beam is figured extra.

No allowance or deduction is made for skylights, elevator, stairway, or other openings or offsets of less that 50 square feet.

Sidewall and Wainscoting: To arrive at the amount of sidewall material required multiply the height (from top of baseboard to bottom of metal cornice) by the belt measurement. Where wood wainscot is used multiply height (from top of wainscot to base of metal cornice) by belt measurement.

On metal sidewall material no deduction is made for openings of less than 25 square feet, and only for whole sheets on larger openings.

TO ESTIMATE PRICE

On the following pages, we give the list prices on the individual members or items that make up the complete design, also list prices on the complete design for rooms of approximate size.

To arrive at the lump sum list price of material for a room, first find the number of squares of material required and multiply this by the price per square on room of nearest corresponding size. Count the number of cornice miters required, multiply by price each, and add to first total. (Miters are not included in the price per square so must be figured extra.)

Example: Figuring Design No. 2113 with 6 in. deep cornice.

Room 20 ft. x 60 ft. =	12.81 squares @ $9.50 =	$121.69
4 only miters	.40 =	1.60
	Total List Price	$123.29
Room 18 ft. x 40 ft. =	7.79 squares @ $9.80 =	$76.34
4 only miters	.40 =	1.60
	Total List Price	$77.94

Beam covering figured at individual list price for material used.
All prices in this book subject to discount.

SIMPLE RULES FOR MEASURING

Metal Ceiling: With each ceiling we furnish a blue print showing the exact size and arrangement of the material required for that ceiling, therefore the measurements and information furnished us must be exact or the material will not fit.

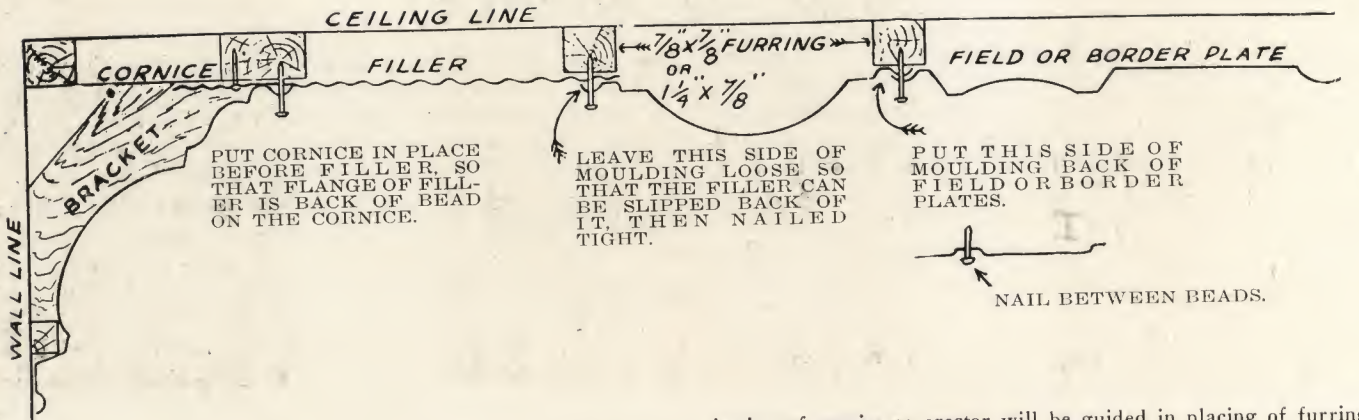

In reporting measurements for plans it is well to make a rough sketch showing total width and total length of room, also exact size and location of any openings or offsets such as skylights, stairways, elevator shafts, chimneys, etc. Also state whether or not cornice can be used entirely around the room. In many buildings the windows or glass fronts extend clear to the ceiling or else there is only space for a 2 or 3 inch deep cornice. It is important that this information be given on sketch.

The distance to the ceiling from the top of window and door casings or shelves should be given to enable us to determine the depth of cornice to be used.

Metal Sidewall and Wainscoting: In sending in order or inquiry for sidewall material, rough sketch should be made of each wall showing exact size and location of all openings, offsets or obstructions, also height from top of baseboard to ceiling, and the width or length of each wall.

Metal cornice is part of ceiling.

Metal baseboard not furnished unless specified. The price depends on height desired.

DIRECTIONS FOR ERECTING METAL CEILINGS

With every ceiling we furnish a blue print or working drawing showing the exact size and arrangement of each member of the combination ceiling design; also a packing slip containing itemized list of material shipped, and a crate list showing number of crates in shipment and contents of each crate. These should be checked with the material immediately and if any shortage exists, we will, upon being notified, make correction, providing such notice is given us before commencing erection of the ceiling.

Study the plan carefully, and verify measurements, as this plan is made strictly in accordance with measurements and information furnished us, and ample allowance is made for cutting, laps and waste. Any additional material required on account of incorrect information or measurements, or changes in measurements, will be charged for extra.

Furring strips must be used when applying over plaster or joists. ⅞ in. x ⅞ in. strips are generally used although some erectors prefer ⅞ in. x 1¼ in. particularly when applying over joists. When applying over sheathing no furring strips are necessary.

Furring is placed at right angle with joists. Cross furring parallel with joists. When commencing erection the first thing to do is strike a chalk line from both ends at points indicated on working plan as "starting line." This gives you the starting point from which to work.

Place the first wood strip on "starting line," and parallel with this place the balance of strips 12 inch on centers for plates excepting such 24 inch multiples as are rigid enough to stand stripping 24 inches on centers. Headers or cross stripping are placed at end or lap of each plate either 2, 4 or 8 ft. apart depending on length of plate. Blue print shows width of moulding, filler and borders, also projection of cornice so erector will be guided in placing of furring strips to receive same.

It is necessary that furring strips be centered exactly to the center of the nailing buttons on each plate, as indicated on plan.

Chalk lines should be struck for all cornices and mouldings to insure an absolutely straight job. Wood brackets are furnished for all mouldings and cornices large enough to permit of their use; one bracket for each length of moulding or cornice and two brackets for each miter or corner. Brackets are used only under laps.

When erecting the cornice, nail the bottom in position first leaving the top edge loose so the filler may be slipped under if necessary. This should also be done with the outer edge of the moulding or border. The filler is provided to take care of any small variation so when the edge of cornice and moulding are left open the filler is easily underlapped.

After the furring is up, it should be leveled and with this done the field plates should be applied first, referring to the plan for starting point. The border or moulding should be next applied leaving the outer edge un-nailed. The filler is next applied lapping one edge under the outer edge of mould or border which is then nailed securely. The cornice is then put up with the filler under lapping. In applying plates it is well to tack them until making sure they are correctly placed then drive nails securely home.

Erection should be started in the rear, working forward, as this brings the laps away from the light.

We furnish square miters for all cornices 4 inches and larger.

Practically the same instructions for stripping apply for sidewalls. In cases where wainscot is used, the wainscot is applied first, then the wall plate, working from bottom up to edge of cornice.

Painting: Metal Ceilings are primed one coat light gray pure linseed oil primer. To get the best effect in decoration metal ceilings should be painted with dull or flat color paint, which brings out all the details of the pattern.
